The electrified easel that becomes a collection

We are excited to present the latest news about Harvey. The electrified trestle designed by Francesco Faccin for Et al. now becomes a real collection thanks to its new configurations.

Harvey is a tribute to the essentiality and structural effectiveness of an architectural object like the trestle. As Faccin himself says: "*The easel is an anonymous object, a mute servant that has always helped man to perform many tasks and trades*". Through electrification, Harvey adapts to modern needs, perfect as a table stand in contemporary environments such as coworking, offices and even in our homes.

The latest innovations include the introduction of connecting crossbars, which allow Harvey to be used with a wide variety of tops of different sizes and types: linoleum tops - thicknesses 27 and 33 mm -, maple veneered tops, satin glass and compact tops are now part of the range. This means that Harvey is no longer just an easel, but a complete collection with multiple customisation possibilities.

Don't miss the opportunity to discover the infinite potential of Harvey and to integrate it into your spaces with style and functionality.
Our sales team is available for further information.
